Senior Software Engineer | Suite Studios

Cover letter

Hi Suite team,

I call myself a technomancer. Technology has felt like magic to me since I was a kid, and art has always been part of that curiosity. I like figuring out how a small amount of code can produce something rich, useful or surprising. The technical constraints are often where the interesting work starts.

Suite's focus on keeping creative teams in flow caught my attention. I have worked on both sides of that problem: building experiences with artists and designers, and supporting the infrastructure people depend on. Waiting on a system or fighting its handoffs takes attention away from the work someone actually wants to make.

I'm building Kerf, an early TypeScript/TSX framework with its own compiler and UI tools. Clear contracts and useful diagnostics matter to me because they help someone make the next change without having to understand everything at once. I enjoy the design work as much as the implementation: deciding what a tool should make easier, and what complexity it should keep out of someone's way.

In my completed ProofMark contribution, I connected signing, identity, document fields, routing and audit history through React, Next.js, APIs and PostgreSQL. Explicit state and fallback paths keep the workflow understandable when something does not go to plan. My own client-operations platform applies the same interest in connected context to support, customer records and infrastructure, with separate tooling that checks recovery rather than assuming it works.

My operating background also shapes how I write software. At FRII, I developed PHP and JavaScript web services and handled billing-system development and replacement alongside NOC leadership, Docker and recovery. Through Technomancy IT, I still own client work from incomplete requirements through implementation and support. I want to understand what happens after a feature ships.

I'm self-taught and enjoy learning with other people. I would welcome practicing XP with your team and bringing that mix of creative curiosity, full-stack ownership and hands-on troubleshooting to the problems you are solving.

Chad
